

Editorial to the second issue of International Journal of Geoscience, Engineering and Technology

We present the second edition of the *International Journal of Geosciences, Engineering and Technology* with selected articles that contribute to advances in multidisciplinary characteristics in their areas of research.

It will be through scientific research that societies will achieve development and become more just.

Investment in education and support for the maintenance of research are the strength of science's actions, in favor of quality and meaningful education.

The mission of this journal is to be a showcase of initiatives and ideas, with an effort focused on structuring and consolidating scientific thinking in the areas of Geosciences, Engineering and Technology.

The International Journal of Geosciences, Engineering and Technology is an interdisciplinary journal of the Graduate Program in Technology, Environment and Society of the Federal University of Jequitinhonha and Mucuri Valleys (PPGTAS/UFVJM).

Advances in education are strengthened by research and must be an integral part of the academic world. Research is strengthened by different intradisciplinary views, which must be exercised with actions and contradictions.

Advances in knowledge include the dissemination of research and its results.
